

CASE STUDY

Project: Wood Lane Station Development
Project value: £86,000
Client: London Underground
Main Contractor: Installation Project Services
Dates: December 07 - April 08

Background:

A major new Shopping Centre development for Westfield Shoppingtowns Ltd, incorporating a new Underground station.

Giffen Switchgear again won this unique contract as a result of its previous project experience within the railway sector, coupled with its ability to produce high specification switchgear tailored to fit within a restricted location..

All materials used in this project had to meet with stringent LUL specifications relating to smoke emission, dust and damp protection. Switchgear was manufactured to BS EN 60439-1 Form 4 Type 7 (front access).

Scope of work:

- Design, manufacture, supply, install, test and commission of low voltage switchboards and remote power factor correction equipment.
